# Messenger DM Tool

## How to Install & Get Started

Step-by-step guide for Mac & PC (Google Chrome)

This guide walks you through purchasing, installing, and running Messenger DM Tool on your computer. Follow each step in order. If you need help, contact achdouzcompany@gmail.com

*Version 1.0 | (c) 2026 ACLLC*

## Before You Start - Requirements

Make sure you have the following before installing:

- Google Chrome browser (latest version) - Mac or PC (Windows).
- A Facebook account you are logged into.
- The extension ZIP file you received after purchase (from Payhip).
- A stable internet connection.

## Part 1 - Install the Extension

### Step 1: Purchase & Download

Go to the product page and complete your purchase. After checkout you will receive instant access to download the extension file (ZIP). Save it somewhere easy to find, such as your Desktop or Downloads folder.

### Step 2: Unzip the Extension File

Locate the downloaded ZIP file. Right-click it and choose "Extract All" (Windows) or double-click to unzip (Mac). You will get a folder containing the extension files. Do NOT delete this folder - Chrome needs it to run the extension.

### Step 3: Open Chrome Extensions Page

Open Google Chrome. In the address bar type: chrome://extensions and press Enter. This opens the Extensions management page.

### Step 4: Enable Developer Mode

In the top-right corner of the Extensions page, turn ON the "Developer mode" toggle. This allows you to load unpacked extensions.

### Step 5: Load Unpacked Extension

Click the "Load unpacked" button (top-left). A file dialog opens. Navigate to the unzipped extension folder and select it, then click "Select Folder" / "Open". The extension will appear in your list.

### Step 6: Pin the Extension (Optional)

Click the puzzle-piece icon next to the address bar, find "Messenger DM Tool", and click the pin icon so it stays visible in your toolbar for quick access.

## Part 2 - First Campaign

### Step 7: Log In to Facebook

Open https://www.facebook.com in Chrome and make sure you are logged into your Facebook

account. The extension works on the Facebook website.

### Step 8: Open the Extension Side Panel

Click the Messenger DM Tool icon in your toolbar (or side panel). The extension panel opens. Here you create DM templates, choose your target audience, and set pacing.

### Step 9: Create a DM Template

Go to the DM Templates section. Enter a template name, type your message (you can use spin syntax like {Hi|Hello} {name}), and save. This is the message that will be sent.

### Step 10: Create a DM Bot & Start

Create a DM Bot: choose your target type (friends, followers, group members, custom users, hashtag, location, post), select your template, set time interval and max users, then click "Start Working". The extension runs in the background.

## Tips for Best Results

- Increase the time interval between DMs to reduce the risk of your account being restricted.
- Avoid sending the same message to many people - use spin syntax to vary messages.
- Keep daily volume reasonable and make sure content is personalized and valuable.
- If the bot does not work, switch Facebook language to English and restart the task.
- Do not close the Facebook page while a task is running - it will stop the task.

## Troubleshooting

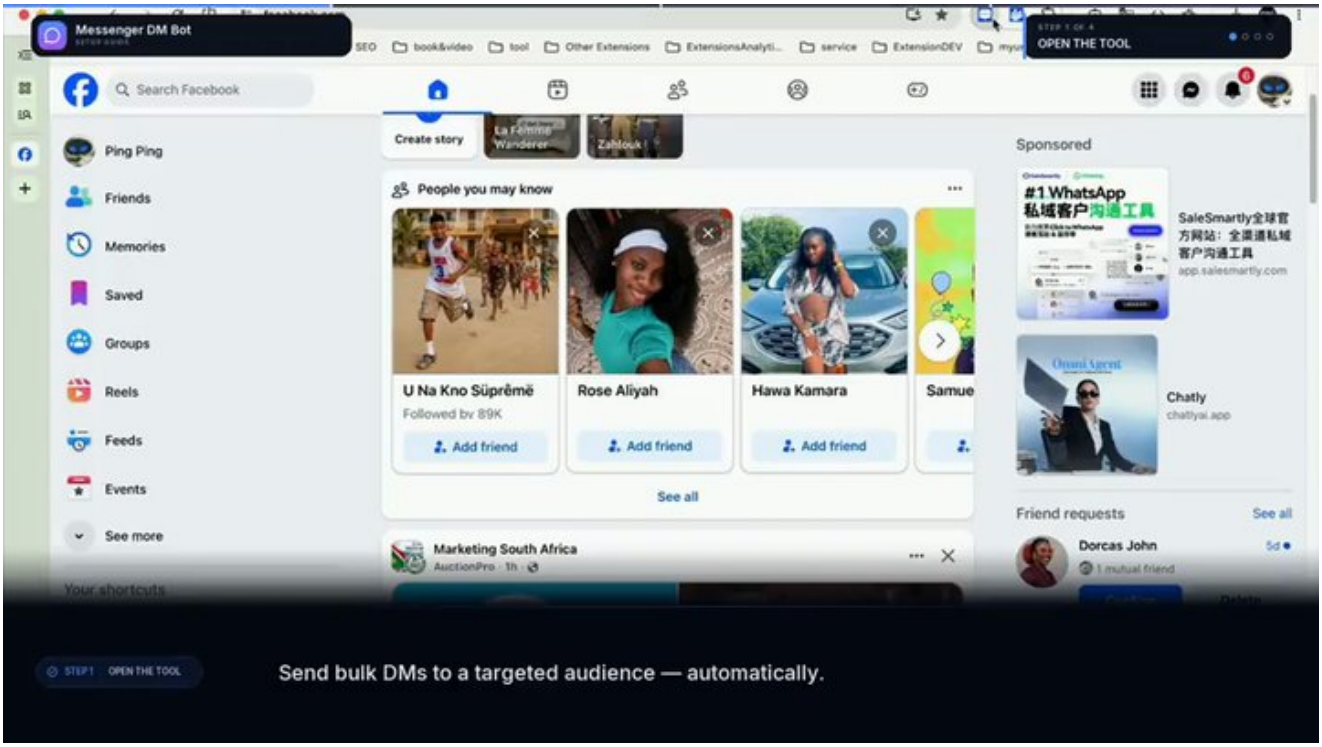

Extension not loading? Make sure you selected the correct unzipped folder (the one containing manifest.json), and that Developer mode is ON.

Task not sending? Confirm you are logged into Facebook, the page is open, and your target list/hashtag is valid.

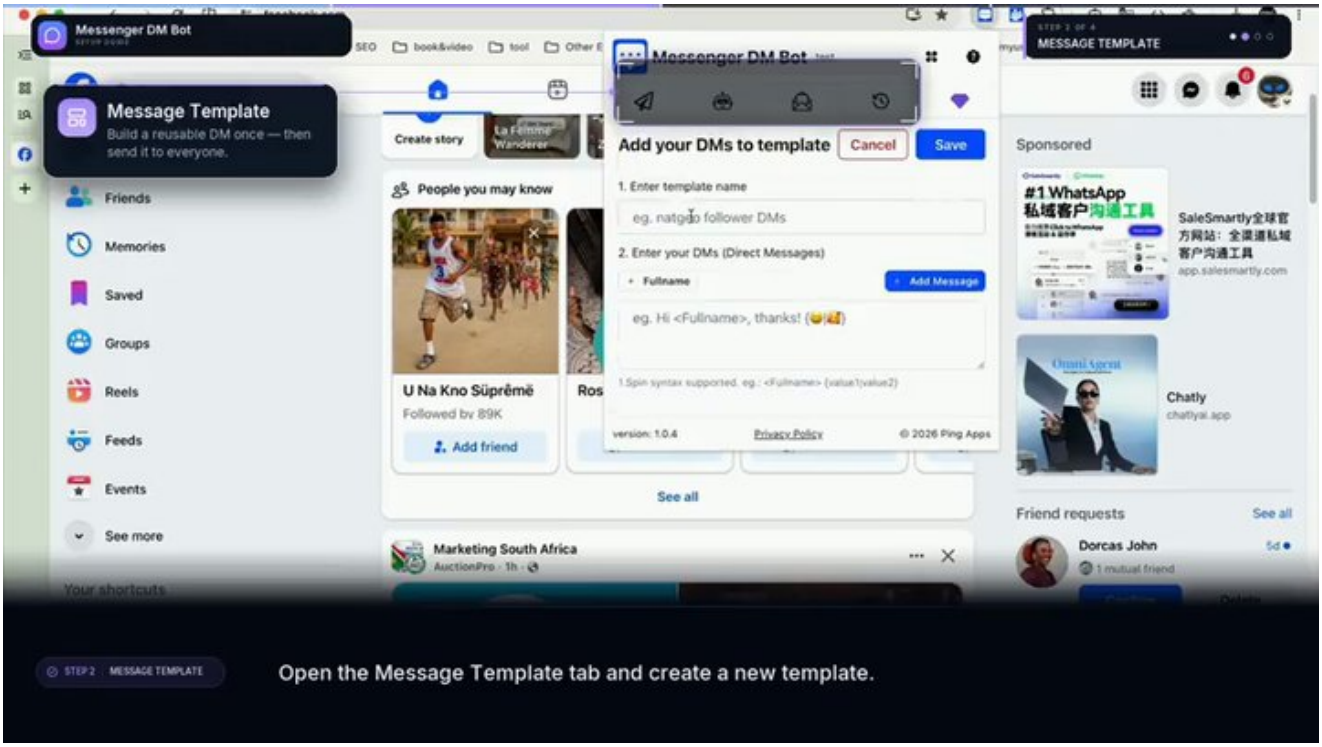

Account restricted? Increase intervals and pauses, use the blacklist, and reduce daily volume.
